

# Waterhemp

Is it hiding in your fields?

## THREAT

Waterhemp is becoming a greater concern across Ontario. Populations resistant to multiple herbicide groups are appearing more frequently and in new counties each year. This highly adaptive species with its high seed production, has spread across Ontario and can cause significant yield losses. •

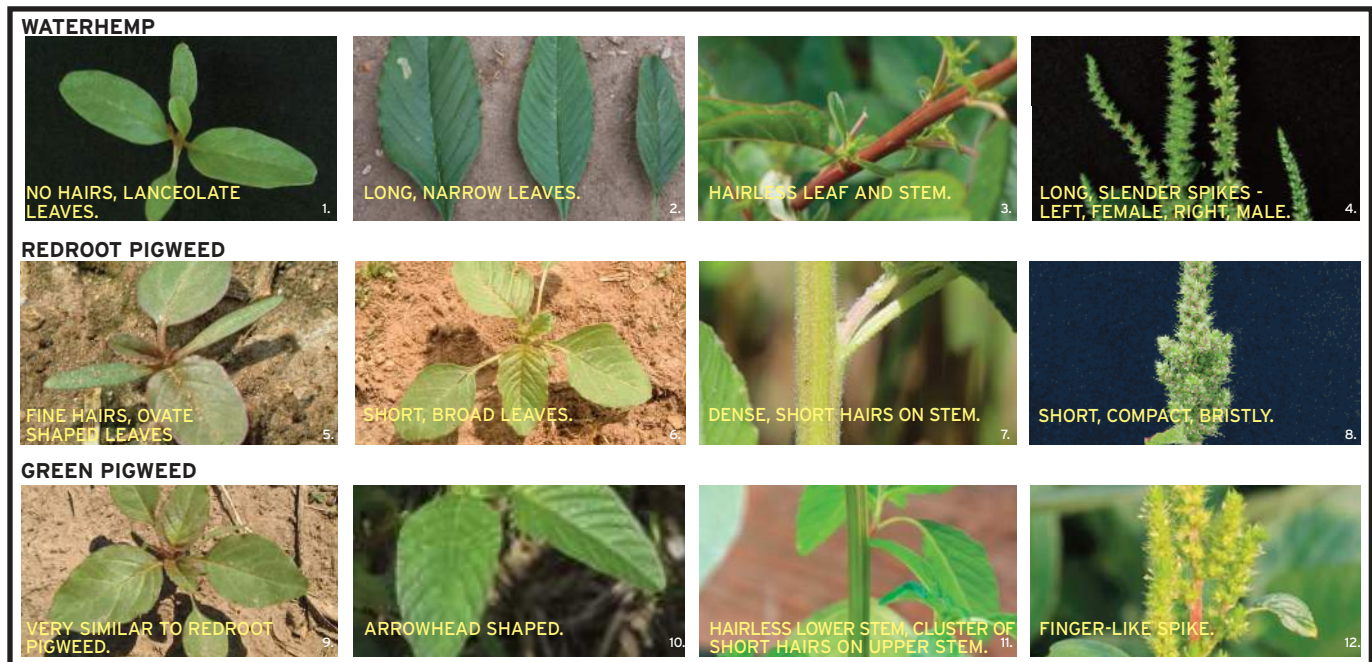

## IDENTIFICATION - WATERHEMP VERSUS PIGWEED VARIETIES

### IDENTIFICATION

Waterhemp is from the pigweed (Amaranth) family. Close relatives include redroot, green, smooth, prostrate, tumble and the

United States menace, Palmer amaranth. Waterhemp looks similar to redroot and green pigweed, but is distinguished by its lack of hairs and narrow leaves with way

margins (see photos below). Waterhemp has male and female plants (dioecious) that look like two different weed species when they mature.

This research was supported by Grain Farmers of Ontario.

## CONTROL

Waterhemp can germinate and emerge throughout the growing season. The following strategies are most effective at controlling waterhemp and minimizing seed return:

- Implement a two-pass herbicide program using residual herbicides with multiple modes of effective action.
- Reduce the spread of this weed by properly identifying and then isolating the contaminated fields by restricting equipment movement to clean fields until the equipment is thoroughly cleaned.
- After harvest, plant a cover crop such as oats, cereal rye or an oats and oilseed radish blend. Cover crops will inhibit waterhemp emergence, growth and seed production. Mowing or clipping may be necessary to minimize seed production of escaped plants.

## TESTING FOR RESISTANCE

If you suspect you have resistance or want to confirm that you have waterhemp or pigweed at seedling stage or later, you can participate in a current testing project to find out. Testing requires a small amount of leaf tissue at any growth stage. Sample kits and directions can be sourced by contacting Kristen Obeid, Weed Management Specialist – Horticulture, OMAFRA, cell: 519-965-0107, email: kristen.obeid@ontario.ca.

More weed control recommendations can be found on the Pest Manager App (<https://gfo.ca/about/mobile-apps/>)
